

MISSING

Did you know 1) Cows must have a baby to produce milk, 2) their babies are taken from them so we can take their milk, 3) they're known to cry and call for their babies for days, and 4) since their male babies can't produce milk, they're almost all killed within months of birth.

However, no animal on Earth normally drinks breast milk after infancy, certainly not from the mother of another species, and neither should you. Dairy has cholesterol and sex hormones, links to acne and certain cancers, and all those commercials about strong bones were untrue. And that's just the beginning of:
